

**Our integrated
eBay link allows
your shop to
increase their
marketplace,
without the
hassle**

According to eBay "there are 23 million monthly unique visitors in the UK and Ireland every month" ...that's a third more than Oxford Street! Our new eBay link allows your shops to tap into this market place without the hassle.

We pride ourselves on the continuous improvement of our CHARiot EPOS system but we develop with the input of our customer, the charities who are currently using our system. We often hear how difficult managing retail via eBay can be with shops having to send items to head office to be listed. This process is very manual, time consuming and lengthy, our eBay link reduces levels of manual input and allows better control over gift aid on donated goods.

NIRVANA TECHNOLOGY SOLUTIONS GROUP

Our CHARiot EPoS software has been developed specifically for the charity shop sector and after working in the sector for 10 years, we know what you need.

Our eBay link solves the usual problems associated with selling on this platform. No longer will shops need to keep multiple spreadsheets, CHARiot will reduce paperwork. If a shop wants to sell an item on eBay via head office, our system will gather the details required and produce labels that can be sent with the items for sale. CHARiot allows head office to create an item for sale and our system know which shop it is coming from and whether it is Gift Aided or not.

We know some eBay shops are controlled by head office and some shops have individual eBay accounts. Our eBay link works for each:

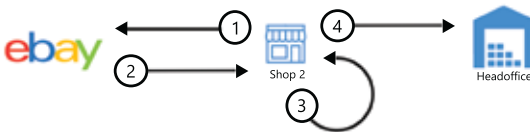

eBay controlled by head office

1. The Shop sends the physical product to Headoffice
2. Headoffice will put this item for sale on eBay
3. Headoffice will download the orders that have been processed and payment has been completed
4. Headoffice will send the order down to the shop that sent the product
5. The shop will process the order as a sale through the till and capture the gift aid at the same time
6. Sales information for reporting purpose is sent back up to Headoffice

eBay controlled by individual shops

1. The shop will put the item for sale on eBay
2. The shop will download the orders that have been processed and payment has been completed
3. The shop will process the order as a sale through the till and capture the gift aid at the same time
4. Sales information for reporting purpose is sent back up to Headoffice

Key Features

- Integrated into CHARiot system, no requirement for another application
- Gives your charity better control over pricing
- Improved analytics including automated confirmation of sale, values and eBay fees due
- Better brand visibility by controlling content from CHARiot, protecting your charity brand and improving awareness
